Market Report

The *months of inventory ratio* (total inventory / monthly sales activity) continues to be an important market indicator, comparing the number of months it would take to sell current inventories at the current rate of sales activity. This ratio can suggest if the market is moving quickly or slowly, and how long the average property may stay on the active market. The January *months of inventory ratio* was at 8.1. A score of 6.4 is still generally thought of as a “balance market,” not favouring either the buyer or seller.
