

Safety Consulting with Archbright™

At Archbright, we understand the most effective safety programs are those built and managed from inside an organization. We also understand that sometimes this simply isn't possible. For member companies who need onsite support for their safety program, we offer Safety Consulting.

Safety Consulting

With Safety Consulting, our Safety/Loss Control Consultant will work onsite at your location to monitor workplace activities and ensure your employees are complying with company policies and government safety regulations.

Our experienced consultants will successfully support your organization in a variety of safety functions including:

- **Develop safety policies.** We will work with managers and workers to determine what policies are needed to help you reduce accident-related costs and prevent losses due to a decline in productivity. Once finalized, our consultant will alert workers about the change and monitor compliance.
- **Perform workplace inspections.** We will inspect interior and exterior work areas to determine if there are any safety hazards, including broken equipment, damaged equipment, and slip-and-fall hazards. The consultant will also observe workers to ensure they are wearing required personal protective equipment.
- **Investigate workplace incidents.** When an incident occurs, your onsite safety consultant will investigate to determine why the incident happened. This may include questioning witnesses, inspecting the incident scene, and taking pictures of any property damage. The consultant will then write an incident report with recommendations to help prevent future accidents.
- **Implement safety training.** Safety laws require employers to provide training on dozens of safety topics. These include fire prevention plans, hazardous materials handling, and machine guarding. Your consultant will identify training needs, develop appropriate training programs, and deliver training to employees.
- **Ensure compliance with governing agencies.** Employers must comply with regulations published by DOSH (Division of Occupational Safety and Health) and WISHA (Washington Industrial Safety and Health Act). This involves reviewing standards, implementing plans to meet those standards and following all record-keeping requirements.

While onsite, our Safety Consultant will work with your organization to build the infrastructure for a comprehensive, self-sustained Safety & Health Program.

Let Archbright help you keep your workplace safe and sound.
